

The World is facing a disruptive transformation

Tools

- Cell, Gene, Nucleic Acid therapies and Regenerative Medicine
- Biomanufacturing
- Data, AI and computational methods to transform Drug Discovery

Diagnostics

- Early stage Cancer detection to change treatment choice
- Personalized treatments
- Lab developed tests migration to kitted / Distributed model
- Point of care to gain importance
- Single cell analysis, sequencing and related tools

Treatment / Surgery

- Robotics
- Remote monitoring and intervention
- Miniaturization

Tech convergence accelerates the change
